VEGETABLES - PROCESSING

ANNUAL SUMMARY

1957

Production of the 10 principal vegetables for processing in 1957 was down 19 percent from the record high of 1956, the Crop Reporting Board announced today. This year's production of 6.75 million tons compares with 8.38 million tons produced last year but is 12 percent above the 1946-55 average. Compared with last year, acreage declined only 4 percent but yields for most crops were below those of 1956.

The production of asparagus was about 2 percent smaller than in 1956 but 11 percent above average. Lima bean production dropped about 14 percent. Output used by freezers was 11 percent less while that for canning was down about one-fifth. Snap bean production reached a record high in 1957 and exceeded that for 1956 by 6 percent. Both canners and freezers used larger tonnages than last year. Production of beets for canning is nearly one-fifth smaller than last year. About one-third less cabbage was used for sauerkraut than in 1956 but last year's kraut crop was unusually large. Unsatisfactory growing conditions in the Mid-West and the Middle-Atlantic States contributed to a 13 percent reduction in sweet corn production. Sweet corn for freezing held close to last year's level but sweet corn for canning fell off 15 percent. 1957 sweet corn production was well above average. Production of cucumbers for pickles climbed to a new record in 1957 exceeding 1956 by 15 percent. Green pea production broke previous records in 1957. The large crops produced in Illinois, Wisconsin, and Minnesota were responsible for this year's increase. Production for freezing, which comes largely from Western States, dropped about one-fifth but the canning crop increased by one-sixth. Processing spinach production increased 3 percent and was 18 percent more than average. Tomato production was reduced 29 percent from the record large 1956 crop but was still slightly above average.

The value of these vegetables used for processing was 271.7 million dollars. This was 45.6 million dollars less than realized in 1956 from these crops. The decline is largely due to reduced production this year.

The rank of the leading States growing processing vegetables is outlined below.

Rank	Acreage		Production		Value	
	State	:Percent : :Of Total:	State	:Percent : :Of Total:	State	:Percent : :Of Total:
1	: Wisconsin	17.5	: California	33.5	: California	25.0
2	: California	13.0	: Wisconsin	10.5	: Wisconsin	10.5
3	: Minnesota	9.0	: Minnesota	6.2	: Oregon	7.8
4	: Illinois	6.5	: New York	5.9	: New York	6.6
5	: Washington	6.2	: Illinois	5.4	: Washington	5.7

This report was made possible by the cooperation of vegetable processors who provided basic statistics concerning their operations. Supplementary information was supplied by State Agricultural Statisticians and cooperating agencies.

Summary of harvested acreage, production and value of principal processing vegetables,
United States, average 1946-55, annual 1956 and 1957.
